

If you tried out IE9 and aren't happy with it or have proprietary software in the office that doesn't work with it yet, reverting back to IE 8 is a simple process.

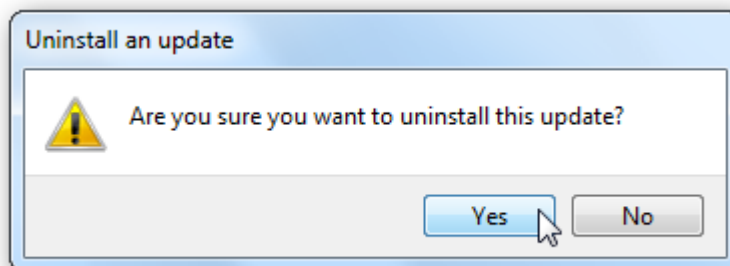

- 1) Open the Start Menu \ Control Panel \ Programs and Features.
- 2) Now in Programs and Features click View installed updates located on the left pane.

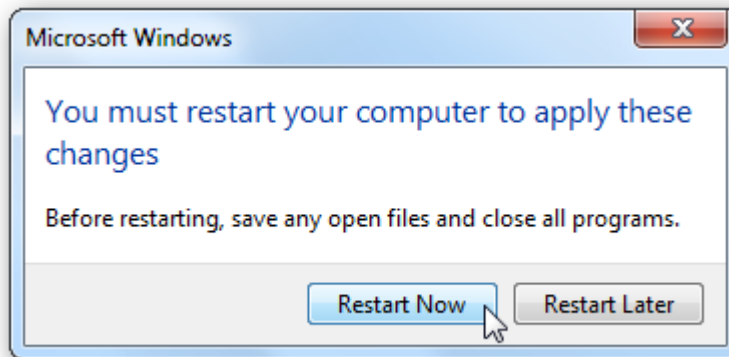

- 3) Then find Windows Internet Explorer 9, right-click, and uninstall.

- 4) Yes we're sure...

5) Then a restart is required to complete the uninstall process.

6) This will restore you back to IE 8 and you will need to go through the process of setting it up again.
